Loctite® PM 5120 Powder Metal Plating Grade Sealant

- Physically optimized for penetrating porosity in powder metal
- Easy to recover in spinning or tumbling equipment
- Designed to minimize interference with electroplating or surface coating processes
- Intended for shallow penetration to seal against low pressure plating operations
- Formulated for controlled cure in active metal substrates at room temperature to avoid bleed-out
- Durable enough to resist strong acids and bases at low temperatures
- Fluorescent dye for cross-sectional inspection
