

LOCTITE®

The Next Generation of Silicone Rubber Release Agents Has Arrived

Let us show you how Frekote® S-50 mold release agent releases even the most difficult silicone rubber compounds, reducing mold fouling for a maximum number of releases.

Loctite® Frekote® S-50 is formulated with exceptional release and slip properties to provide superior performance for the most demanding silicone rubber molding applications.

When properly applied to a preheated surface, this water-based agent forms a thin, inert, thermally stable coating capable of releasing most types of silicone rubber compounds.

What's more, S-50 can be diluted with water over a wide range of ratios to accommodate a variety of applications.
