

Handling Solutions for Engineered Materials

Custom Packaging Options for MRO

The aerospace group of Henkel offers several pre-measured packaging options that are especially suitable for maintenance and repair operations. Mixing small quantities of two-component materials is easily accomplished with cartridge kits, pudding cups, and E-Z PAK®.

Reduction of Hazardous Waste

With conventional adhesive handling systems, transferring adhesive from one container to another can generate hazardous waste. When adhesive is dispensed using our pre-measured packaging, negligible amounts of adhesive are wasted and may be disposed of in a less costly way, minimizing employee exposure to hazardous materials.

Improved Employee Productivity and Safety

Conventional adhesive handling systems rely on a technician to measure, transfer, mix, and dispose of resin, catalyst and cured material waste. This process of mixing and preparing adhesives for application diminishes productivity. Pre-measured packaging minimizes time-consuming and costly preparation and disposal activities.

Henkel provides custom packaging services for Hysol materials. Purchasing your Hysol custom packaged material direct or from an authorized Henkel distributor is the best way to assure compliance with OEM specifications and FAA regulations on traceability. Please call with your Hysol material dispensing or packaging application requirements.

Types of Custom Packaging

CARTRIDGE KITS

Barrier cartridge kits and injection cartridge kits are disposable plastic cartridges capable of mixing two-component materials prior to dispensing. They are available in 1 oz to 10 oz sizes.

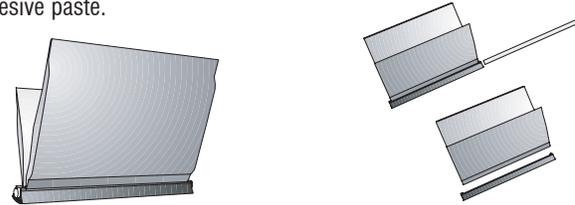

Barrier-type cartridge kit

Injection-type cartridge kit

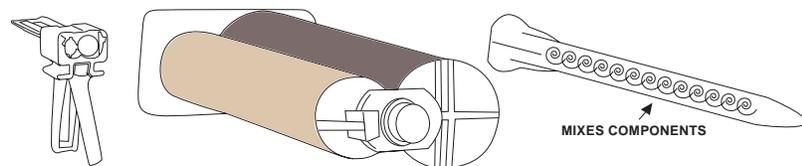

E-Z PAK®

E-Z PAKs provide a high integrity barrier pouch divided by an easily removable clip. The clip separates two compartments, which can hold almost any two-part adhesive paste.

DUAL CARTRIDGE / STATIC MIXER KITS

Dual cartridge/static mixer kits store two-component materials, which can be mixed during the dispensing of the product through a static mix nozzle. They are available in 50 ml to 1500 ml sizes.

PUDDING CUPS

Pudding cups offer the convenience of hand mixing with the assurance of correct mix ratios. They are available in a variety of fill sizes designed to fit your processing needs.
